

Northern Utah Hit By Quake

SALT LAKE CITY (UPI)—An earthquake centered in northern Utah toppled walls, broke windows and cracked ceilings yesterday as it set the ground swaying in three states. No one was hurt.

The tremor, strongest felt in the area since 1959, radiated from an epicenter located in the Cache Valley of Utah to southern Idaho and western Wyoming. Only in Utah was serious damage reported. The quake hit at 6:36 a.m. (MST).

One expert said an aftershock nearly as strong as yesterday's 6.1 reading on the Richter Scale could be expected at any time. Damage was heavy in Richmond and Lewiston, Utah, where foundations and walls of several homes were severely damaged. Schools were closed in Richmond and Logan.

In Logan, a city of 18,000, several buildings at Utah State University were badly damaged.
